8 Keys to Health Management

- Health risk assessment
- Industrial hygiene and workplace environment
- Medical emergency management
- Management of ill-health
- Fitness for task assessment and health surveillance
- Health Impact Assessment
- Health reporting and record management
- Public health interface and promotion of good health
Healthmap is a tool to initiate the first steps to managing 'health' and provides the basic building blocks to help achieve BP's Commitment of 'no harm to people'. Healthmap can cover the whole range of health and industrial hygiene issues through a systematic process that identifies and prioritises health issues relevant to a particular site, BU or SPI.

To get started with Healthmap, click on the training / workshop tabs above. Here you will be able to access an e-learning training module to familiarise yourself with the Healthmap application, as well information on how to set up a successful Healthmap workshop, and details on workshop facilitator training events.
